Online Shopping System

SRS:

The online shopping system is used to reduce the time & effort required for normal shopping.

It helps in managing orders, customers, shipping carts, admins etc.

- The system is used by a user who can be an admin, a session manager or a customer.
- The admin handles actions like create & delete departments and product. He can view the catalog details, update new product details, or existing ones & can also manage customers
- Customer — can Register & login to system — can buy products by searching — update profile & can make payment
- The session manager - listing products — Getting customer detail - Give order detail
- A shopping cart - list of products a customer intend to buy
- A various order can be placed in the system by giving relavant order detail.
- There exist different departments which contain various category of product.
- Once an order is placed, the shipping info of the product must be available for product delivery to customer.
